NEOVISION FR

101384

Sustainable, flame retardant, linen-look screen with 16% openness factor

NEOVISION FR incorporate the sustainable PureFR™ treatment developed by Almedahls. Otherwise, NEOVISION FR is developed from the NEOVISION base fabric and is available in 6 neutral shades.

NEOVISION FR belong to the Beyond Screen category with an openness factor of 16%.

The key distinguishing factor of NEOVISION FR is a unique sustainability profile which includes a recycled polyester base, Oekotex labelling, and the Five Zero Green sustainability programme.

Visually NEOVISION FR is akin to a linen fabric with plenty of tactility and textile feel.

A selection of colours are available as vertical and panel subject to minimum order quantity.

PORTAVISION FR

101781

Flame retardant screen in regular and tight mesh with 10% openness factor

The PureFR™ flame retardant treatment developed by Almedahls takes sustainability in FR fabrics to a new level. Porta is Greek for door. PORTAVISION FR is a flame retardant version of the popular PORTAVISION Beyond Screen fabric with 10% openness factor.

The visual appearance is that of a regular and tight mesh with a softer expression, as it is woven with a spun yarn. PORTAVISION FR is found in five neutral volume-based colours which are easy to fit into any space.

PORTAVISION FR will work well in environments with somewhat more incoming light, and a desire for both outlook and daylight control.

Available as vertical and panel subject to conditions.

EXCELLENCEVISION FR

101383

FR screen in 235 cm width and 8% openness factor

Looking for all the characteristics of EXCELLENCE, but less light filtering and in a flame retardant version? The Beyond Screen fabric EXCELLENCEVISION FR features an openness factor of 8%, plus the visible woven texture and genuine textile feel of EXCELLENCE. Also, the fabric is flame retardant and in 235 cm width.

The flame retardant solution used in EXCELLENCEVISION FR is the PureFR™ from Almedahls which is based on phosphor and hence does not contain harmful bromines.

The colour scale of EXCELLENCEVISION FR offers 5 options. Importantly, the fabric is suitable for use in care environments where products shall be disinfected through cleaning with approved solvents.

100% polyester

FABRIC WIDTH

235 cm

EXCELLENCE FR

101400

A flame retardant light filtering, functional Plain with Personality in 235 cm width

The personality of EXCELLENCE FR can mostly be attributed to the visible woven texture in the fabric. Otherwise, the product is filled with function such as sound absorbing properties, suitability as a platform for digital printing, as well as a unique sustainability profile stemming from use of the PureFR™ flame retardant treatment from Almedahls.

EXCELLENCE FR filters the light with meaningful solar reflection values and is obvious for spaces with direct and strong solar exposure to create a comfortable indoor climate without darkening the room.

The fabric is offered in 2 shades of white, and in 235 cm width to provide more flexibility in waste management.

EXCELLENCE BO FR

101771

FR black out, multi-function Plain with Personality in 230 cm width

The flame retardant version of EXCELLENCE BO contains the PureFR™ flame retardant solution which is skin neutral as the active ingredient is sealed in the fibre. Consequently PureFR™ is both safe and green. Visually, EXCELLENCE BO FR has a premium appearance rooted in the dense texture of the fabric as well as a tactile handfeel. The fabric is offered in 5 bestselling colours.

The white backing of EXCELLENCE BO FR contributes to high solar reflection. The fabric in colour version white is part of our Hygiene Concept and may certifiably be disinfected with alcohol solvent. We also recommend EXCELLENCE BO FR for digital printing.

Available as vertical and panel.
